Environmental Aspects Summary

The process of identifying and understanding the environmental impacts we have on the environment is central to our Environmental Management System and key to improving our environmental performance.

We take into account impacts associated with past, present and planned new activities, products and services, and those associated with routine working conditions, occasional working conditions and potential emergency situations.

The following table summarizes the aspects that we consider to be the most significant on the environment, factoring in environmental and business impact, which provides a focus for their management.

Activity	Aspects
Chemical waste	Production of hazardous waste
Glass Breakage	Production of waste glass
Oil storage	Potential spillage
Laddaw Transport	Diesel fuel use
Removal of waste packaging DC	Production of waste packaging (wood, plastic, cardboard, metal)
Office waste	Production of waste paper, plastic cups bottles cans, toner cartridges and IT equipment.
Canteen waste	Production of waste packaging (cardboard, cans, plastic cups, bottles), food, and cooking oil.
Cooling	Use of refrigerant gases
Deliveries	Potential noise
